A Fresh Paper With Tables

Abstract

We measure two retrievers on a new corpus.

1 Introduction

Dense retrieval1 beats BM25 when k=10.

The corpus was collected in October 2026.

1Code at example.org.

2 Results

Retriever	Recall
BM25	0.61
Dense	0.74

Table 1: Recall at 10.

BM25	Dense
2	31

Table 2: Latency in milliseconds.

2.1 Cost

The dense index costs more[2].

$$c = n\ p$$

[2]Measured on one machine.
